

This is a great opportunity to leave notes that can contain any text. What is most remarkable is that you can search by notes, while fast navigation between objects allows you to speed up and structure the workflow. To make changes, left-click on the notes field.

Use 'ESC' to cancel and 'ENTER' to save changes in the note creation window. To create an identical note for several objects, select several objects and click on the field of the selected object.

To open the search window, right-click on a note.

To search for all the notes which are in the current scene, right-click on the name of the module or the empty field of the note
