

This module provides convenient work with prefabs.

To quickly jump to the original prefab in the project, left-click on the prefab icon.

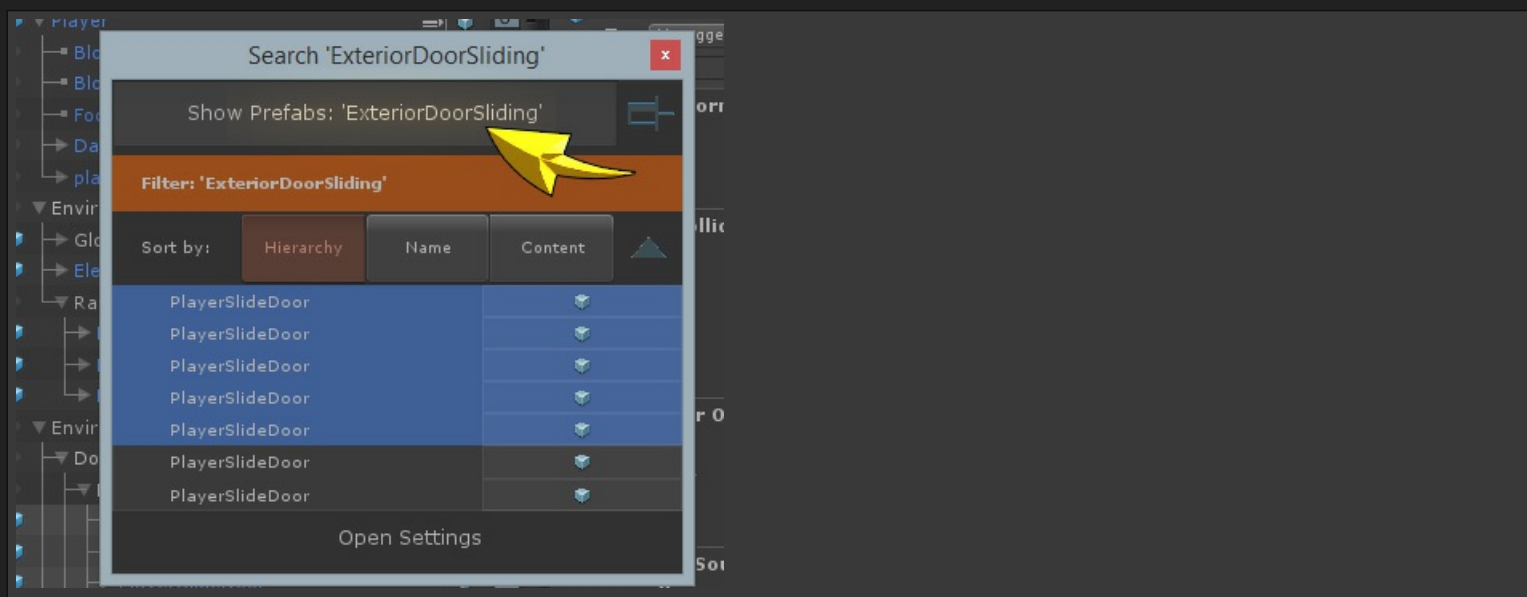

To quickly save changed parameters, select several objects, hold down 'CTRL' and left-click on the prefab icon.

You can select several prefabs at once to make changes immediately for all of them.

To search for objects in the scene, which reference the same original prefab, right-click on the prefab icon.

To search for all prefabs which are in the current scene, right-click on the name of the module or the empty field.
